Red blood cell formation and control of pernicious anemia Synthesis and function of nerve tissues, such as myelin Metabolism of carbohydrates, fats, and proteins. Vitamin B12 is necessary for the conversion of methylmalonate to succinic acid, an important Krebs cycle intermediate in energy production Synthesis or transfer of single carbon units., e.g., allowing the interconversion of serine and glycine and the conversion of homocysteine to methionine. Serving as a coenzyme in the biosynthesis of methyl groups Involvement in reactions that convert disulfides (S-S) to the important sulfhydryl group (S-H) Improving and/or eliminating pernicious anemia Improving symptoms of celiac disease Reduction of homocysteine levels (used in conjunction with folate and Vitamin B6) Improvement of mental dysfunction in the elderly Useful in protocols for asthma and sulfite sensitivity
