Accurate Results, stable and reliable SC-60+ works on Electric Impedance method which is best principle to measure blood cell count.

Cell particles guide, accurate signals reflect the size of the cells. PLT simulation curve, reduce the influence of RBC with PLT counting.

External wide power supply and anti-interference components make the machine more stable and reliable.

Very sensitive hardware check program, like self check, all board (Altera Corporation, USA) voltages, valves check etc., help engineer to rectify the problem in minimum time.
