

*“Choosing a balanced and a well proportioned feed yields superior production benefits.”*

**For obtaining optimum growth following practices are recommended:**

PH level of 7-9 is required to maintain for a healthy growth (8-8.5 is preferable).

7500-10000 Spawn/Early fry size per hectare is ideal.

With the first rain after cleaning and treatment of the pond, May-June is the right season for releasing the Spawn.

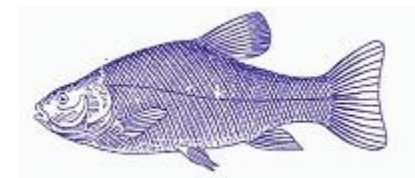

**SUPPORTING OUR FARMERS FOODCHAIN.**
