

**Operation**  
Manual or Motorized  
Vertical Shutter

**Grille Finishes**  
The grilles are made from aluminum or stainless steel in a brick pattern. The finishes available are natural anodized for aluminum or polished stainless steel. Powder coating is available to our range of standard colors.

**Modern Elegance and Visibility**  
With wide spaced grilles forming a strong brick pattern or straight pattern, the grille provides a modern and elegant solution to cover shopfronts and provide visibility.

**Maximum Sizes**  
12000mm (w) x 4000mm (h)

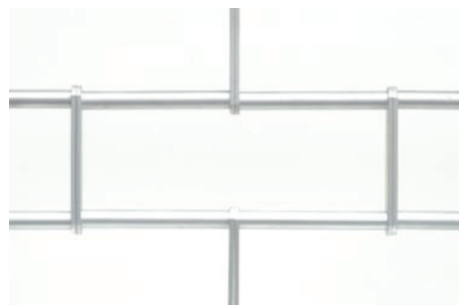

# SECURITY ROLLER GRILLES

*Elegance, Security, Visibility*  
Roller grilles are a great way to cover wide opening widths while providing both visibility and security. A brick pattern ensures that the grille remains strong, while wide spaced links provide a high level of visibility.

Straight Pattern Grille

Japanese Style Brick Design

## **SAG FREE DESIGN**

Our double link design ensures that you can cover large widths (up to 12000mm) in a single panel without the risk of sagging.

## **ELEGANCE FOR WINDOW SHOPPING**

Our roller grilles with wide spaced links and a modern brick pattern in aluminum or stainless steel, ensure you get the best of both worlds; security and perfect visibility.

## **VENTILATION**

Roller grilles are suitable applications when you want ventilation to be combined with a need for high visibility. Our design can provide almost 75% - 80% of ventilation.

## Grille Curtain

The straight pattern heavy duty grille curtain is made out of 19mm x 2mm thick natural anodized aluminum tubes with a dia 7mm reinforcing bright steel bar and a 2.5mm thick natural anodized aluminum 'double-link' to avoid sagging in the middle. Both ends of the steel rod are locked with a galvanized washer and a lock pin to keep the grille panel rigid.

A single link "brick pattern" aluminum grille can be employed for sizes up to 2.5m (w) x 2.5m (h). Stainless steel grilles are optional.

## Shutter Box

The shutter box is made out of two heavy duty steel endplates of thickness 4mm - 7mm joined together using five 50mm x 25mm steel hollow sections. Two 50mm x 50mm x 4.5mm thick steel angles with slotted fixing holes are welded with the end plates to fix the shutter box to the structure.

## Barrel

The barrel is made out of heavy duty seamless steel pipes that are welded with axles of sizes f35mm - f50mm according to the size of shutters. These barrels are fixed to the right and left end plates with heavy duty bearings.

## Side Rails

For exposed, face fixing applications, 'G' shaped guides are made of heavy duty 75mm wide x 75mm deep x 3mm thick galvanized steel.

For concealed guide application, 75mm wide x 75mm deep x

1.5mm thick 'U' shaped galvanized guides are used.

## Bottom Bar

A 86mm high x 81mm wide T-shaped bottom bar is made of twisted natural anodized aluminum links bolted with two 38mm x 38mm x 4.5mm thick galvanized steel angle bars.

## Box Cover

The shutter box covers are made out of 0.8mm thick bent galvanized steel sheets. Folded edges provide the required stiffness to the shutter box covers.

## Shutter Operator

A suitably sized, fully enclosed designed motor with high starting torque, built-in gear box and built-in thermal protector is used. The shutter operators are provided with an 'endless hand chain' for manual operation from ground level and an 'emergency closing lever' for closing operation.

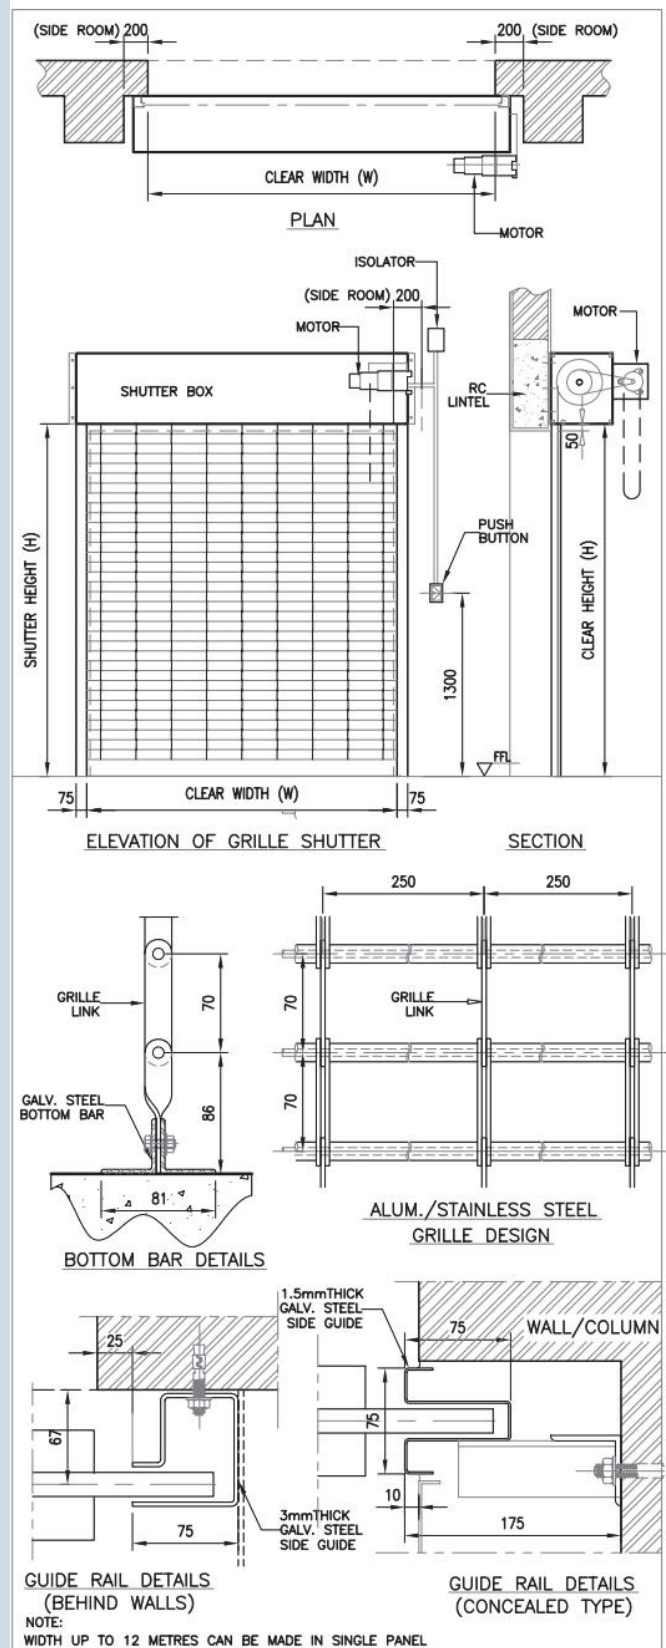

## M & E Requirements

1 phase, 230 V, 50HZ, 13A / 3 phase, 415V, 50Hz, 20A power supply at motor location.

## Optional Devices

Stainless Steel Grilles  
Safety Edge  
Automatic Programmable Timers  
Remote Control
