CETPLAST PA

1717

Liquid integral waterproofing admixture for Plasters

Description:

CETPLAST PA is based on processed Ligno sulphonates. Generally cement particles tend to clump together and works by improving the dispersion or the bubbles within the mortar mix which ensures that the cement is used more efficiently.

Advantages:

- Increases plasticity and prolonged workability.
- Easier speeding and adjustment of bricks and block.
- Reduces dropping and wastage of the mortar cost saving.
- Reduce durable and improved finishes.
- Minimize shrinkage cracking and crazing in screeds or renders.
- Reduces water absorption and penetration.
- Provides cohesive, non bleeding without any segregation

Area of application:

Internal and External Wall Plastering

CETPLAST PA is liquid concrete and mortar admixture which interrupts the formation of capillary channels and hence, improves

mortar's resistance to rain water and dampness.

CETPLAST PA reduces the quantity of water required to achieve the workability, thus reducing the possibility of drying, shrinkage, which can result in cracking and crazing.

Direction for use:

CETPLAST PA may be premixed with mixing water in a storage tank or added to wet cement mortar at the time of mixing

Dosage:

Add CETPLAST PA in the proportion of 200 g to every 50 kg bag of cement.

Packing:

Supplied in 20, 50 kg, & 200 kg
