

Focus

The Focus is a double bearing handpiece with a slim barrel for comfort and a long-lasting flocked grip for ease of use. The sealed ball-bearing technology provides cool, smooth running and reduced maintenance. The strength of the comb bed assists in producing superior cutting action, and the width allows little deflection of the comb, resulting in a low degree of tension required. The Focus is available with spline drive for the safety conscious professional user in conjunction with a solid drive. The traditional pin drive is available for use with the flexible drive.

Key features

- Double bearing handpiece
- Reduced maintenance
- Cool running
- Superior cutting action

Laser Shear

- mains/12 volt

The Laser is a heavy duty, motor in-handpiece shear, designed for farmers, for dagging and small flock shearing. The mains motor is double insulated and features a ventilated head and a built-in overload switch. The mains version has a 5m cable and a moulded-on plug. The 12 volt version has a special 5m low-loss voltage cable and heavy duty battery clips, for use on a vehicle battery. An optional clipping head is available for versatility, if used with Wizard sheep blades, it is ideal for dagging. The Laser comes in a durable carry case with accessories.

Key features

- Mains or 12 volt versions
- Patented ventilated head
- Power efficient motor
- Built-in overload switch
