

Nova ▶

- mains/12 volt

This double insulated machine designed for the farmer/shearer operates at 2800rpm, through a 6ft flexible drive. The ultra low starting current makes it ideal for use with portable generators as well as mains electricity. The Nova has two switches for dual operation and has the standard rope on/off switch. The 12 volt version, with 6ft flexible drive, is suitable for use with a vehicle battery providing total safety and convenience where electricity is not available. The speed, dependent on load and battery, is normally around 3200rpm.

◀ Nexus

The worlds leading capacitor start and run machine comes with standard speeds of 2800, 3200 and 3500rpm to suit all shearing conditions, and shearers ability from beginners to experts. It can be powered from either a mains electricity supply or, due to its low starting current, from a generator which makes it ideal for use on shearing trailers. The overall construction of the Nexus is solid yet lightweight. The motor, capacitor and switch are contained inside an impact resistant moulded casing. Available with either solid or flexible drives. The solid drive is supplied with spline connection as standard and the flexible drive has a bayonet connection.

368 Grinder ▶

This professional double-ended grinder is ideal for the professional shearer or regrind agent. It has a capacitor start and run motor (2800rpm). The 368mm aluminium discs are dynamically balanced and are fully guarded. The 368 Grinder is supplied with adjustable pendulum, portable aluminium discs and clamp plate, emery cloths and glue.

Adjustable Pendulum ▶

Supplied with every Lister grinder or as an accessory, it is suitable for ALL types of sheep-shearing combs and cutters and the telescopic pendulum caters for different grinder models. The Adjustable Pendulum gives the operator the control to grind to particular requirements.

Solid and flexible drives

A full range of solid and flexible drives is available to fit all current and most older Lister Shearing Equipment machines.

Also available

Portable disc set - This consists of two 368mm aluminium discs, contained on a clamp plate with carry handle.

Abrasive cloths for discs - in Grade 40,60,80 and 120.
