We also make mortising Chain Sets as per customer requirement.

TCT tipped chain sets are also available with us.

Specifications:

The material quality of Guide bar, Chain set & Sprocket is of the best type. Proper Jig, Fixtures and decent machining on CNC machines makes it the best set of indian market. We assure, it's smooth & silent running as shape of sprocket & chain links are properly designed & machined. We take special care while drilling the chain links as it controls the pitch of the chain. Annealing process is done after heat treatment to maintain chain's required hardness & to avoid the cracks in the hardest wood or in roughest operations.

Each Chain set is packed in special thermocol packing with silica gel to avoid rust & transportation damages.

An instruction manual is provided with every packing of chain set.
